Proposal Summary

This proposal presents practical ideas to improve Gestavia's website and digital presence, making it clearer, more engaging, and more effective for business clients.

The goal is to create a modern, responsive, and well-structured website that clearly showcases the company's services, strengthens its professional image, and delivers a smooth user experience across all devices.

Problem Statement

Key Limitations of the Current Website

- Outdated design that does not reflect professionalism
- No clear value proposition on the homepage
- Not fully responsive on mobile devices
- Content relies on large text blocks
- Use of generic imagery instead of real visuals
- Services are not clearly structured or easy to understand
- Weak navigation and user journey
- Lack of clear call-to-action elements
- Limited trust signals and credibility elements

The website structure and content are not optimized for search engines (SEO), limiting its ability to attract organic traffic and potential clients

Website Analysis

Based on an initial analysis, using tools such as Google PageSpeed Insights, GTmetrix, and Google Lighthouse the website shows opportunities for improvement in performance, responsiveness, and SEO. Its current structure lacks clarity, with weak navigation, poor mobile optimization, and limited guidance for user actions.

Tools referenced:

Google PageSpeed Insights (pagespeed.web.dev)

GTmetrix (gtmetrix.com)

Google Lighthouse

Proposed Solution

- 1 Redesign homepage with a modern and professional layout
- 2 Introduce a clear message explaining services at first glance
- 3 Implement fully responsive design for all devices
- 4 Use authentic visuals representing real operations
- 5 Add clear actions (contact, request services)
- 6 Add clear actions (contact, request services)
- 7 Apply basic SEO practices for better visibility

Expected Impact

Stronger professional image and digital presence

Enhanced user experience across all devices

Improved clarity in communicating services to potential clients

Increased engagement and conversion of visitors into clients

Visual Concept

A simplified visual concept was developed in Figma to illustrate the proposed improvements and provide a general idea of the website's potential structure and user experience. This mockup is intended as a conceptual reference, focusing on clarity, layout, and user flow. A final implementation would incorporate real Gestavia content, higher-quality visuals, and a more refined design.

Conclusion

This proposal presents a set of practical improvements aimed at enhancing Gestavia's website in terms of structure, usability, and communication. These changes will contribute to a more professional digital presence and a more effective user experience. Furthermore, a stronger website foundation can support and amplify the company's marketing efforts, including social media channels, by improving brand consistency, increasing visibility, and driving user engagement.
